

**EMF safety guidelines are fraudulent because  
biological effects are excluded and  
5G small cells will increase EMF exposure**

**Martin L. Pall, PhD  
Professor Emeritus of Biochemistry and Basic Medical Sciences  
Washington State University  
Address: 638 NE 41stAve., Portland OR 97232 USA  
martin\_pall@wsu.edu**

Europe Direct has stated that “smaller cells with lower power levels used by 5G are likely to decrease the overall EMF exposure in areas where 5G is deployed.”

Professor Pall challenges this assertion, stating that 5G small cells will *increase* EMF exposure and that EMF safety guidelines are fraudulent because biological effects are excluded.

**Please disseminate widely.**

1. Seven repeatedly documented findings each show that EMF safety guidelines do not predict biological effects and are therefore fraudulent. The consequences for both microwave frequency exposures and 5G.
2. 5G: Great risk for EU, US and international health. Compelling evidence for eight distinct types of great harm caused by electromagnetic field (EMF) exposures and the mechanism that causes them.
3. 41 expressions of high-level concern drafted by scientists and/or medical doctors regarding the health impacts of low-level EMF exposures.
